Q is D , in this software ‘D’ is a function, so we instead use Q.
PL is the linear power spectrum.
$\mathcal{H}= a$ H where a is the scale factor, H is the Hubble parameter.
Pmnc denotes the loop terms defined in C.Howlett 2019 (H19).
Pmn denotes the loop terms defined in Vlah12 (V12).
We want to check if there is any bugs in Pmnc of H19.

Sec.1: Comparing the expressions of the power spectrum of H19 to those of V12 and O14

1.1: The density power spectrum

This is the density power spectrum of H19, see the Eq.A2 of H19:

In[ ]:=
```
Pδc = p00c + μ^2 ( 2 p01c + p02c + p11c) +
    μ^4 (p03c + p04c + p12c + p13c + 1/4 × p22c); (* Eq.A2 of H19 *)

Out[ ]=
$$p00c + 2\,p01c\,\mu^2 + p02c\,\mu^2 + p11c\,\mu^2 + p03c\,\mu^4 + p04c\,\mu^4 + p12c\,\mu^4 + p13c\,\mu^4 + \frac{p22c\,\mu^4}{4}$$

On the other hand, the expression of density power of V12 is given by :

In[∘]:=
$$P\delta = p00 + \left(\frac{k\,\mu}{\mathcal{H}}\right)^2 p11 + \frac{1}{4}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^4 p22 + 2\left(\frac{-\mathbb{i}\,k\,\mu}{\mathcal{H}} p01 + \left(-\frac{1}{2}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^2\right) p02 + \frac{\mathbb{i}}{6}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^3 p03 + \left(-\frac{\mathbb{i}}{2}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^3\right) p12 + \left(-\frac{1}{6}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^4 p13\right) + \frac{1}{24}\times\left(\frac{k\,\mu}{\mathcal{H}}\right)^4 p04\right);$$ (* Eq.2.23 of V12 *)

This is the momentum power spectrum of H19, see Eq.A3 of H19:

In[ ]:=

$$Pmc = \frac{\mathcal{H}^2}{k^2} \times \left(p11c + \mu^2 \times (2\, p12c + 3\, p13c + p22c)\right);\ (*\ Eq.A3\ of\ H19\ *)$$

4.4: P02, P03 and P04, P12 P13 and P22:

P02:
We do not need to modify P02 for cross-PS. The expression of P02 of cross-PS is the same as auto-PS. In V13, Eq. 2.13, the $\overline{\text{P02}}$ is calculated from dark matter PS (see the first term of Eq.2.30 <$\delta|u_{||}^2$>),
it is purely the contribution from dark matter and should be an auto-like term.
The P^hh_00 of Eq. 2.13 should be auto-like term rather than cross-like term P^hhbar_00. From the second term of Eq.2.30, we can see that

<$\delta|\delta\, u_{\|}^2$> = <$\delta|\delta$><$u_{\|}^2$> = <$\delta|\delta$> σ_v^2 where <$\delta|\delta$> is P^hh_00 which is an auto-like term.

P03: **P03cor = - f^2 k^2** σvc^2 **p01c** : use cross-like p01c of Sec 4.2.

P04: In Eq.2.47 of V13, $\overline{\text{P02}}$ is auto-like term, in H19 Eq.A8, just replace b_1^2 with $b_1\overline{b}_1$ and use P00 of Sec 4.1 .

P12: use cross-like p01 of Sec 4.2.

P13: **p13cor = - f^2 k^2** σvc^2 **p11c ;** use cross-like p11c of Sec 4.3.

P22: use cross-like P00 of Sec 4.1 . Do not need to modify p02.
